In order to meet the NSF/ANSI 2 - 2018 requirements for food shields, all glass panels must be fully tempered and conform to the ANSI Z97.1 standard. To protect against chipping, exposed edges of glass should be protected by tight fitting channels, stripping materials, or other means such as rounding the edges of tempered glass.

Acrylic or Polycarbonate panels may be used in lieu of tempered glass and still meet the NSF/ANSI 2 - 2018 requirements.
